LABORATORY TECHNICAL REPORT

Item Description: One free form piece of polished Agate.
Dimensions: 33.00 x 23.00 x 9.00 mm.
Weight: 12.00 grammes.
Refractive index: 1.546.

Agate is part of the quartz group of minerals. It is cryptocrystalline in composition. This piece is semi-translucent dendritic Agate. It is not dyed.

This piece is unique. It has white Agate marking which may be read as "ALLAH" it may also be read as "MOHAMMAD" with pesh and tashdeed differentiating the word.
(see photograph)

These marks and the whole piece are entirely of natural origin and are in no way modified by man except to polish the face to reveal the marks.
